v1 and v2 ask which score; v3 first asks whether there is a verdict at all

Sense v1 (Experiment 2): learned WildFB's own labels

Reaction
request, next move, words

One question: which score?
100, 80, 20, 0 or null, in a single step
null when it is less than 0.70 sure (a fixed threshold)

Sense v2 (Experiment 3): learned a teacher's labels

Reaction
request, next move, words

One question: which score?
100, 80, 20, 0 or null, in a single step
null when it is less than 0.65 sure (calibrated)

Sense v3 (Experiments 4 and 5): learned a teacher's two answers

Reaction
request, next move, words

1 A clear verdict?
on the result, not the effort; at least 0.80 sure

yes

2 Which score?
100, 80, 20 or 0;
at least 0.70 sure

no

null: nothing learned

stops here: thanks for trying, the next request with no comment, sarcasm, settling, silence (Table 2)

The creature then

yes (100, 80): a lesson
80 at half weight

no (20, 0): a retry
on WebShop, with a hint

null: nothing
