v3 first asks whether the user gave a verdict at all; v2 only asks which score

Sense v2 (Experiments 2 and 3)

Reaction
request, next move, words

One question: which score?
100, 80, 20, 0 or null, in a single step
null when it is less than 0.65 sure of its answer

The creature then

yes (100, 80): a lesson
80 at half weight

no (20, 0): a retry
on WebShop, with a hint

null: nothing

Sense v3 (Experiments 4 and 5)

Reaction
request, next move, words

1 A clear verdict?
on the result, not the effort; at least 0.80 sure

yes

2 Which score?
100, 80, 20 or 0;
at least 0.70 sure

no

null: nothing learned

stops here: thanks for trying, the next request with no comment, sarcasm, settling, silence (Table 4)
